

I.V. Dental Sedation

Why Choose I.V. Sedation?

- ✓ Increase patient comfort
- ✓ Alleviate patient anxiety
- ✓ Increase patient satisfaction
- ✓ Increase patient safety
- ✓ Complete multiple treatments during a single procedure

What To Expect

A certified registered nurse anesthetist (CRNA) will facilitate a smooth, comfortable, and safe dental procedure of any kind. A CRNA is a highly trained anesthesia professional, licensed to provide anesthesia care to patients for any medical procedure. The morning of your procedure, a CRNA will perform a preoperative evaluation, start an IV, titrate anesthesia medications to keep you comfortable during the procedure, monitor vital signs, and facilitate postoperative care.

Is I.V. Sedation Safe?

The same standard of anesthesia care for hospitals and ambulatory surgery centers also applies to dental office settings. IV sedation allows you to recover quickly and resume normal daily activities in a short period of time. By utilizing Intravenous (I.V.) Sedation, the dentist can give their undivided attention to the procedure while a CRNA cares for you before, during, and after the procedure.

What Is The Next Step?

Ask us about I.V. Sedation Services! We will provide you with all the information that you will need. We ask that you simply fill out a short health questionnaire when you schedule your appointment. If you have any questions, please don't hesitate to ask!

- ✓ Schedule an appointment
- ✓ Complete short health questionnaire
- ✓ Coordinate a responsible driver for the day of your procedure
- ✓ Have a great patient experience
